Editorial AS WE SEE IT

The general level of business appears to be steady on a relative high plane, but the year has not come up to many expectations and is not now what a good many optimists had forecast. The President sees no indication of real trouble ahead, but on the contrary believes the outlook is definitely good. At the same time some others, notably certain labor leaders, are equally sure that trouble of proportions threatens. This, of course, is a political year, and the outgivings of public figures and others interested in promoting the welfare of certain politicians or parties must be read with that fact carefully in mind. But there is no gainsaying the fact that there are disappointments here and there in the business world, and some sincere uncertainty of mind about the future.

In these circumstances, the Federal Reserve has taken a number of steps which were clearly dictated by the current popular notion about how central banks should operate and what they should do to keep the wheels of business turning at a high rate of speed. Some weeks ago it took steps to increase free reserves and to keep them at a level higher than they had been. Soon thereafter it increased the reserves of member banks and reduced reserve requirements in certain instances. Then followed reductions in the discount rate at a number of the Reserve banks. There is some disposition in Federal Reserve quarters to label all of this, or at least most of it, as merely routine and not to be taken as an effort to reduce interest rates all around. The fact remains, however, that the steps now taken are precisely of the nature required by current ideas about the role of the Federal Reserve System under the so-called full employment act of 1946.

May Get Credit

Should business presently increase its pace, the System will doubtless be given credit for having intervened at an early date and helped prevent a recession. Should a recession presently come upon (Continued on page 12)

Insurance Stocks as Investments For Capital Growth and Income

By Thomas R. Drey, Jr., Dorchester, Mass.

Why insurance stocks can afford excellent long term prospects, contain advantages over an investment trust, weather the business cycle better than most shares are argued by Mr. Drey who does not hesitate, however, to reveal disquieting factors that should not be overlooked in making investment selections. Pick stock carriers for their investment income as well as underwriting growth, he says, and avoid laggard companies even with long dividend paying records who have lived off rising investment income and rate increases rather than sound merchandising. Mr. Drey illustrates his lessons on how to cull the better companies by analyzing several of his own preferences.

In the decade just past and during the turbulent eras preceding, few stocks have shown as relatively high degree of stability as those of the insurance group. Throughout the years, in peace and in war,

in boom and in depression, under Democrats and under Republicans, insurance stocks have, better than any other group, weathered the undulation in the business cycle. It is significant that the insurance business, which by its very nature concerns the instability of economic enterprise, should itself register such an outstand-

The purpose of this article is however, to ex-

amine the future prospects of insurance as a long term investment, to ascertain whether the stability and consistent earnings of the past will yield future repetition, to determine if the historic growth of this vast enterprise will project itself into the future. This can best be accomplished by an analysis of the nature, structure and operation of stock car-

Stability and Operation

Insurance is the business of providing against contingencies, which confront our economic enterprise. Against these contingencies the stock carrier offers its reserves, surplus, and capital as a pledge of security, as a guarantee that it can and will meet all its obligations. The laws of the various states impose somewhat stringent regulations relative to the operation of the business. Adequate reserves must be maintained and the investments of the carrier so regulated as to insure security of the principal. Furthermore the carriers must issue annual statements showing their assets, liabilities, income and expenditures. An insurance carrier is also subject to examination by the insurance department of every state in which it may legally contract business. Thus the very nature of the business demands stability and the states, through statute and regulation, have made certain that such stability will be maintained.

The operation of stock insurance enterprise concerns three important activities, the acquisition of business, the underwriting of risks, and the investment of capital, including surplus and reserves. Through a vast agency system, extending usually from coast to coast, the stock carrier produces and expands its business. The product which it has to sell is neither a security nor a commodity but rather a note written in good faith, a pledge that the carrier will, for a consideration called the premium reimburge the helder or his heirs. mium, reimburse the holder or his heirs, should he suffer such loss as stipulated in the policy. The purchaser must first of all be convinced, by a rec-

ord of past performance (Continued on page 24)

ing performance. The history of the business, from Nicholas Barbon's "Fire Office" in London to the great stock companies of America, is one of few fatalities and many achieve-ments. This remarkable success Thomas R. Drey, Jr. may be attributed to the steadily increasing complexities of commercial life, which in turn demand

Data-Controls System

DCS is a proprietary electronichardware concern boasting both exceptional engineering and management skills. Its sphere of

existence is predicated on telemetering which in itself encompasses three definite expanding facets of the electronic age namely data gathering, miniaturization, and microwave utilization. Its profit conscious management has

Scientific companies go through three major stages of development, each in turn drastically reducing the survival rate. The initial stage embodies the origin DCS customer list includes all of an idea and the procurement of a minor research and engineering contract. Volume at this point ranges between \$400,000 and \$1,000,000. The second stage is simply that of building volume to somewhere over \$2,500,000 to \$3,-500,000. It is within this second poses fall by the wayside. Survival is now based upon an ability to create and retain a permanent up of its particular industry. The founded on the following:

Policy of Product Development

DCS concentrates on what its management terms sophisticated systems. Plans are to use specialized designing talents and highly brought the company to a point 000,000. where shortly it will be able to offer equipment for all three major mobile telemetry systems. At present, it does not seem likely that this broad spectrum approach can, or will be duplicated by other firms within the predicted future. Recognizing that miniaturization was of potential major importance, DCS concentrated much of its efforts in that direction. One result of research here has been the creation of a combination oscillator-amplifier barely twothirds the size of the formerly used oscillator alone.

Marketing Policy

Some 80% of its sales are either off the shelf or short lead time items. In addition the sales force has been augmented with a widely circulated catalog. Mail orders are running in the vein of \$75,000 a month, and indications are that this rate may be increased to some \$125,000 in the coming year. Of necessity, this short delivery policy involves considerable inventory risk, and indeed the rapid changeover from tube to solid state electronics was a source of major concern as to the value of stocked goods. However, management seems confident that the potentials of this policy to a large extent negate the hazards involved.

Customers

quantity of another kind than can be conveniently transmitted.

A telemetering system incorporate the same three essential elements as are required in a system for measurement on nonelectrical quantities by electrical means: (1) a transmitting unit or transducer; (2) a receiving unit; (3) an interconnecting circuit or The success of any compo- channel instruments related to the system. There are three basic FM/FM 80%, PDM 19% and PCM 1%. The future, however, will see PCM emerging as the major facin all three fields. Competition in Texas Instruments seems to be making a major effort in PCM.

DCS sales for the fiscal year ending Sept. 30 should approximate \$4,500,000 comparing with \$2,573,638 in 1959 and \$845,994 in 1958, the company's first year of operation. Net income this year despite a poor start should not vary greatly from the \$137,955 (including a tax benefit of \$23,307) re-The wealth of scientific and sult of 1959. The first year ended with a loss of some \$154,560. A sales volume in the coming year of over \$6,500,000 seems quite asconservative. However, past years' figures cannot be the basis for any conclusions as to either the future porate-development. The plus factors mentioned in prior paragraphs greatly enhance its prospects of becoming a major factor in the areas which it has chosen for itself. The company's future lies in two directions - internal growth and acquisition. Management seems, quite confident of being able to sustain an internal vital communication link for information systems, and it is quite probable that the first merger steps will be lateral in nature and consider a geographical distribution of company units.

The process of evaluating the value of the common issue of budding scientific corporations of this nature involves of necessity the assumption that their products then transmits the measurements are of types which will be in demand some four to five years from the date of the evaluation. It also involves a calculated decision as to the executive capabilities of the management and the resources and talents to which it has access. In DCS we have (without giving effect to conversion dilution) an 325,000 share common issue currently selling at a market worth of some \$6,500,000 while the com-

The Never-Ending Battle In Behalf of Sound Money =

By Julian B. Baird,* Under Secretary of the Treasury

High Treasury official endorses following aims of Treasury debt management: placing maximum of the debt outside of the commercial banks; restraint on amount of long-term issues sold, particularly in a recession period; and minimum interference with corporate and municipal financing; achievement of balanced maturity structure; and ranging the broad public interest against the desire to borrow cheaply. Cites multiplicity of objectives and guidelines requiring Treasury's consideration. Urges Congressional repeal of the 41/4% interest rate ceiling. Hails success and usefulness of the Savings Bonds program. Concludes currency debasement and other unsound measures would result in shackling of freedom and network of controls by an all-powerful central government.

the American economy to sustain rowers. orderly growth, to generate increased useful employment, to

provide sufficient real capital to finance expansion, and to function as a source of strength for the entire free world, all de-pend on the maintenance of financial responsibility. Yet this important truth, unfortunately,

Julian B. Baird

is not well understood. Bankers, because of their integral role in the functionbecause of their special franchise granted by public authorities—have particular obligations to help educate the public on these matmoney as the basis for a healthy, growing, and free economy is can afford to be a bystander.

Three Main Links

Problems of Treasury's Debt Management

First, the Treasury should manage the debt in a manner that will contribute to, or at least not inhibit, an orderly growth of the economy. To do this it should try, except in periods of recession, to place as much as the debt as possible outside of the commercial banks—apart from temporary bank underwriting. Restraint should be exercised in the amount should be exercised in the amount of long-term securities issued, particularly in a recession period, in order not to pre-empt an undue amount of the new savings needed to support an expansion of the economy. A related aim should be to minimize, as far as possible, the frequency of our trips to the maring of our monetary system—and ket so as to interfere as little as possible with the freedom of the Federal Reserve authorities to take necessary monetary actions, and so as to interfere as little as ters. The battle to maintain sound possible with corporate and municipal financing.

Diamond in the Black

By Dr. Ira U. Cobleigh, Enterprise Economist

Noting the excellent results of product research, plant expansion and diversification at Diamond Alkali Company.

enterprise with about 90% of its sales coming from its principal plant at Painsville, Ohio. The chief products, as indicated by the corporate name, were alkalis; and, in case you're a little rusty on your chemistry, alkalis are caustic soda, soda ash and bicarbonate of

Transformation and Expansion

Since the end of the War, and particularly in the past decade, there has been a broad transformation of operations and a fantastic growth at Diamond Alkali. Dependence on alkalis for earning power has been substantially reduced; a broad diversification of products has been a huge plant expansion. Today, Diamond operates 15 plants in the United States and six in Mexico; and in the past ten years the company has spent \$121 million in new manufacturing capacity, and the modernization of older plants. Over \$30 million has been dedicated to further plant expansion for the years 1960 and 1961 (together). In fact Diamond Alkali has increased its fixed assets at a faster rate, in recent years than probably any other major chemical enterprise.

In what area is all this new capacity operating? First, the home plant at Painsville has been enlarged and updated so that in its specialized field of alkali manufacture, it is now the largest in the world. Because Diamond controlled large salt reserves it started some years ago, the production of chlorine. This has led to large-scale expansion of chlorine products including large capacity for producing polyvinyl chloride resins, and related vinyl chloride monomers. These are useful in plastics, fibers, films and surface coatings. Associated to the expansion in PVC (polyvinyl chloride) is the company's program to produce, from natural gas, the basic acetylene essential to PVC manufacture. Other plant enlargements have been in ce-ment, agricultural chemicals and in coal tar derivatives.

Expanded Research

capacity is the collateral result cross \$145 million in 1960.

This year has not been a wonder- of a dedicated research program. ful one for chemical companies In 1952 Diamond Alkali spent \$1 generally; but it's going to wind million on research, and this was up the best in history for Diamond mostly on processing and product Alkali. And this will be the result improvement. This year the comnot of luck or chance, but of perceptive profit-slanted long-range planning.

In spear the company will spend over \$4 million, attained. This year it should be or about 3% of sales, on research in depth including substantial Financial Position and Corporate At the end of World War II, outlay on new products which Diamond Alkali was a monolothic may be months, or years, ahead register.

> One of the most exciting research advances has been in a new branch of the chemical family, chlorinated xylenes. These project substantial new additions to structure is uncomplicated with earning power as they become applied to consumer products. One successful application is already making quite a name for itself. It is called "Dacthal" and it fills at 62. The regular cash dividend an aching need in suburbia. It is is \$1.80 plus 3% in stock paid last an herbicide and it kills crab year. Dividends have been paid grass. No more the aching extraction of crab grass roots on hands and knees. Applied by Swift & to feel that Diamond Alkali is Co. as a basic ingredient in "Rid" now ready to enter a new order for crab grass control, "Dacthal" of magnitude in earning power; seems to have the answer that that the input of capital, research millions of patient and discour- and product diversification made aged lawn growers have been over the past several years, now waiting for. The company, more-place the company in a less speover, looks forward to substantial cialized position, and make it licensing revenue from patent better able to earn money under royalty revenues and has already all phases of the business cycle. arranged manufacturing and disferent processes to 27 companies in 12 countries.'

In addition to the major enlargement in facilities and of research in recent years Diamond Alkali has done much to departmentalize and decentralize management functions. Within the past decade the operating structure has been separated into seven divisions, each under a major executive in charge of, and responsible for, complete divisional operations. This is a system not only efficient and effective in ings is an uncommon market pheaging and bringing forward exec- the whole market is on an arti- creased further.

gether the results have been impressive. In the past decade, Diatripled, and while net results in over time. some years have been a little uneven due to high startup costs, heavy amortization and depreciation charges, and the 1957-58 recession, the overall curve you can project here displays a significant and solid uptrend. Net sales were \$55.7 million for 1950; they were

Net earnings rose from \$2.32 per share in 1958 to \$3.90 in 1959. This year, due to expanded sales, and improved profit margins in most divisions, profits are expected to reach an all time high of perhaps \$4.40 per share. Working toward this end also is a quite complete cost control and plant efficiency program embarked upon some years ago. Back in 1950 the company earned about 9% net on sales. In the intervening years that profit margin was not again

Structure

Financial position at Diamond of their impact on the sales Alkali has been consistently strong with net working capital, at the 1959 year-end, about \$26 million. The \$15 million required for this year's expansion will be supplied from internal sources. Capital only \$27,722,222 in long-term debt, followed by 2,906,302 common shares listed on the New York Stock Exchange and now selling without interruption since 1932.

The State of TRADE and INDUSTRY

Steel Production Electric Output Carloadings Retail Trade Food Price Index Auto Production Business Failures Commodity Price Index

course of trade and industry is contained in the following national summary of general business and financial conditions as published in the August issue of the Federal Reserve Board's Bul-

Industrial production, construction activity, employment conditions, and retail sales generally continued to change little in July and early August. Credit extended by commercial banks increased. Interest rates declined further.

Industrial Production

Industrial production was un-changed in July and, at 109% of the 1957 average, was around the level prevailing since early spring. Output of consumer goods was somewhat lower in July, while activity in business equipment lines rose to record rates. Production of materials, which had declined 3% from January to June, was maintained in July as inventory liquidation of metals abated and output of fuels and other nondurable materials rose further. Iron and steel production showed somewhat more than the usual sharp curtailment in July. Steel If this viewpoint respecting mill operations, at 50% of capactributing licenses "covering the Diamond Alkali Company is cority, were 30% below the 1957 sale of our knowhow for 18 dif-rect, then we should expect some level, while activity in most steel rather enthusiastic interest in DIA consuming industries was at or common. It still sells below its above 1957 levels.

Auto assemblies were curtailed to recommend it now than when about 12% in July, reflecting in this level was reached. A return part strikes at plants of a major Production schedules producer. for August indicate a less than seathere is in pospect a continuance sonal decline from the reduced July level. Output of home goods was somewhat lower in July, Looking at it another way, the while apparel production opportunity to purchase a sound, maintained at the advanced levels first reached about a year ago. cal equity at above 14 times earn- Output of industrial machinery only efficient and effective in ings is an uncommon market phe- was maintained and activity in practice, but is constantly encour- nomenon. Unless you feel that other equipment industries in-

Construction

The value of new construction out in place during July changed little at a seasonally adjusted annual rate of \$55.5 billion, according to the recently revised Census Bureau estimates. A further decline in public construction chiefly in outlays for conservation and military construction, was offset by a continued increase in private expenditures, mainly for nonresidential construction.

Employment

establishments, seasonally ad-

An authoritative analysis of the justed, was maintained in July at the level which has prevailed since April. Over that period, a decline of about 100,000 in factory employment has been offset by increases in other lines of activity. Total unemployment, including students and recent graduates, declined by 400,000 in July to four million, and the seasonally ad-justed rate of unemployment was 5.4% versus 5.5 in June. Reflecting job cuts in some durable goods industries, however, insured unemployment rose more than seasonally in July.

Distribution

Seasonally adjusted retail sales declined 1% in July, according to preliminary figures, and were little changed from the advanced rate a year ago. Sales at department stores and some other outlets rose further, while sales at auto stores declined 7%. New auto deliveries were limited partly by strikes and by the ending of intensive sales promotions in June. With changeovers to 1961 models under way, a reduction in dealers' auto stocks is indicated in August. Stocks at department stores increased further in June.

Agriculture

Favorable growing conditions in July raised crop prospects 1% to an aggregate volume 1% above last year's record crop. A foodgrain harvest one-fifth above last season was indicated and small gains in tobacco and oil crops were in prospect on Aug. 1. A cotton corp of 14.5 million bales was forecast—about the same as last year's output.

Commodity Prices

Wholesale commodity price indexes generally continued to show little change in July and the first half of August. Prices of some materials such as print cloths and rubber declined, while metal scrap prices were firmer. Trade reports noted marked discounting of prices for some business and consumer goods and such fabricated materials as plywood and copper

Bank Credit and Reserves

Total commercial bank credit increased \$2 billion further in July, reflecting additions to bank holdings of U.S. Government securities at the time of the Treasury's midmonth financing opera-Employment in non-agricultural tions. Business loans declined. The seasonally adjusted money

Signal From the "Box"

In his use of a so-called "Box" for a buying signal Mr. Darvas essentially uses only one more variation of the many long-existing methods practiced by the market practitioners to detect trend, or lack of one, from an issue's previous market price pattern. As recently redefined by Harry D. Comer, Director of Research of Paine, Webber, Jackson & Curtis, "All of the raw materials upon which the market technician works appear on the stock ticker tape. Stock prices and volume of trading are the only data used. These go into various re-arrangements, and finally wind up in charts and tables for technical analysis and conclusions . . . the theory of market action can be helpful in selecting what to buy and at what time, but also in keeping out of "'dead' issues until they are ready to show new life and vigor." Likewise, stemming from the traditional, Mr. Darvas as a buyer uses a varyingly sized "Box," a "break-out" from whose

The Blue List float of available municipals has risen to \$247,879,-482 as of Aug. 24. Last week's total (Aug. 17) was \$204,000,000. This volume of bonds is still relatively light for this time of year

Money Market Developments

money market have continued to side of San Francisco has been trickle in during the past week. At very popular with investors. the present writing ten Federal Reserve district banks have lowered their discount rate from 31/2% to 3%. Only the Dallas and San Francisco Districts remain to be heard from.

The Manufacturers Trust Co. of writing. New York cut its prime lending rate on Monday from 5% to 41/2% Leading banks in New York City and across the country followed suit the next day. The reduction in the prime rate had been expected since the Federal Reserve Board, a fortnight ago, announced its reduction in reserve requirements for so-called country banks, effective last Thursday, and for those in New York and Chicago effective Sept. 1. It was considered inevitable when later in the week the Federal Reserve approved a reduction in the discount rate in these districts from 3½% to 3%.

While all of these moves have helped municipal bond prices, as well as other bond prices, much of the monetary news has already been discounted by tax exempt bond dealers. The municipal market has had a phenomenal rise since late last January, amounting to over four points. During that period over \$200 million of bonds have left the secondary market. plus untold millions of bonds of new issues, and a scarcity of bonds has developed. However, the new issue calendar is expanding daily and buyers in the fall should be able to pick and choose their is-sues and not have to rush in and buy with reckless abandon.

New Issues "Richer"

It is interesting to note that as new issues have recently come to market, yields are from five to 15 basis points (.05%-0.15%) less

tive schedule during the past New York various purpose bonds bama Highway Authority (1961-1980) bonds for September 7; \$7,-

The calendar of scheduled new issues now totals about \$400,-000,000. With the market relatively high, it seems probable that more borrowers will come to market in the near future. The high borrowing costs obtaining through last Spring and early Summer dis-couraged public borrowing and resulted in numerous postponements. The details leading to the financing of new issues are lengthy and involved but given a good market, it is amazing how quickly public officials can get to market with their offerings. The high market seems likely to attract considerable borrowing during October and November which are normally busy underwriting months.

There are at present no negotiated offerings on the horizon. The proposed \$55 million Florida Turnpike Extension seems to be off the calendar until sometime next year. The Florida Free Highways Association has announced Priced to yield from 1.50% to it will oppose the extension and 3.50% for the 1994 maturity (the will offer legal challenges to try will offer legal challenges to try and block this road.

Unwanted Gold Movements

By Paul Einzig

Dr. Einzig pradicts out-flow of U. S. gold, affordable here but unwelcome particularly in West Germany and Switzerland among the receiving companies, will continue at least through our election time. Maintains proper cooperation between U. S. and Swiss authorities could halt and even reverse the movement. Lauds Switzerland's post-war monetary policy in encouraging growth without inflation. Terming the Federal Reserve's non-intervention policy "out-of-date" conservatism, Dr. Einzig calls on the Reserve authorities to reconsider their attitude toward foreign exchange operations.

expect it to come to an end before the election, especially as the American monetary authorities have resorted to an easier monetary policy. Even though the United States can well afford to lose more gold, the

Paul Einzig

movement is decidely unwelcome, not only from an American point of view, but also from the point of view of at least two of the receiving countries - West Germany and Switzerland. The Governments of both these countries have adopted elaborate measures to discourage nevertheless.

Germany's Status

because of the anticipation of a revaluation of the D. Mark and partly because of the high interest rates resulting from a dear money policy aimed against inflation. In Switzerland neither of these two factors operate. Interest rates are low and there is no question of changing the parities of the Swiss franc. Nevertheless, owing to the premium on forward francs it is profitable to transfer funds to Zurich.

As far as such transfers are for covered interest arbitrage, the remedy clearly lies in the hands of the monetary authorities both in Switzerland and in the United States. By adopting a policy of deliberately lowering the premium on forward Swiss francs the

LONDON, England—The outflow halt and even reversed. But both of gold from the United States Switzerland and the United States shows no signs of abating, and it are firmly opposed to engaging in would be unduly optimistic to official forward exchange operations. While the Swiss National Eank operates in the spot market, the Federal Reserve Banks keep strictly aloof from foreign exchange operations beyond carrying out orders of their clientsincluding the United States Treasury and foreign Treasuries or continental holders but deposited Central Banks. This is a great in London—for swap transactions pity, because the adoption of a which tend to increase pressure forward rate policy would provide the answer in many awkward situations such as the present very high deposit rates lately to

Expansion Without Inflation

Switzerland's monetary policy since the war deserves the highest praise. It has come nearer to solvthe influx of funds responsible for ment. The statutes of the Swiss the unwanted gold influx. But the National Bank rule out the posmovement seems to continue sibility of official forward exchange operations. A revision of these statutes to adapt them to modern requirements would have In the case of Germany foreign enable the Swiss authorities to funds have been attracted partly check or greatly reduce the inflow of unwanted funds without having to resort to cumbersome measures which gravely interfere with Zurich's functions as an international banking center. All that would be needed would be for the Swiss authorities to sell Swiss francs forward and thereby to eliminate the premium. This eliminate the premium. This would make it unprofitable to transfer funds to Zurich with the exchange rate covered. And since the spot Swiss franc is at a premium, uncovered arbitrage would entail risk.

Admittedly, part of the funds that are transferred to Switzerland are not attracted by the possibility of making a profit on the yield of short-term investments. But the effect of such transfers mium on forward Swiss francs the could be offset by carrying the movement could be brought to a forward rate policy a stage fur-

York for covered interest arbitrage, and this movement would offset the influx of uncovered

The United States authorities themselves could take a hand in the opposite sense. By supporting the forward dollar they would be able to lower domestic interest rates with impunity. It would become profitable to transfer funds to New York with the exchange risk covered. Such a policy would be too costly and in the long run futile in face of a sweeping speculative pressure, similar to the one experienced in Britain in 1957. But there is no sign of any such pressure in the present instance. On the basis of the prevailing

rates of the forward dollar it is profitable to use "Euro-dollar" deposits—that is, dollars held by continental holders but deposited on the spot dollar. Japanese banks, for instance, have been paying acquire such deposits, and their of forward dollars. Such operaing the problem of expansion tions could be prevented by a forwithout inflation than any other ward rate policy that would country's monetary policy. Interest increase their cost. This could be rates have been kept steady at a done either by the United States low level, and in spite of this the authorities or by the Japanese franc has commanded confidence, authorities. The latter are evi-Yet there is room for improve- dently worried about the extent of these operations, yet even hands they are unwilling to resort count.

Federal Reserve Action Called For

official foreign exchange operaforward exchange operations in particular? Their policy of nonintervention is nothing but out-of-date conservatism of the kind that would be understandable in tradition-ridden Britain but is authorities persist in their oldfashioned attitude.

ther. A deliberate depreciation of the forward franc to a discount would make it profitable to transfer funds from Zurich to New Reduces Size of Our Deficit Position

Exports now exceed imports by a differential of \$3.7 billion compared to S3 billion in this year's first quarter, at annual adjusted rates, according to the Commerce Department. Offsetting this, however, are capital outflow and other international payment which leave a deficit of \$3 billion in the balance of payments—a decline of \$4.2 billion from comparable first half of 1959.

Foreign transactions of the United Compared with the second States in the second quarter of quarter of last year-when noninstitutions of nearly \$3 billion, at total balance of payments deficit an annual rate, approximately the rose to its maximum—the 1960 same as in the previous quarter, second quarter improvement in the Office of Business Economics, the trade balance was more than U. S. Department of Commerce \$3.8 billion at an annual rate. This announced Aug. 8. For the first resulted from the rise in exports, half of the year, the deficit of although imports were slightly nearly \$3 billion at an annual smaller. Over the same period, rate records a substantial reduc- the balance of payments on all tion from the \$4.2 billion figure transactions - as measured by recorded in the first half of 1959, movements of gold and recorded and the \$3.8 billion total for the liquid dollar liabilities - shifted year 1959 as a whole.

Exports Continue to Improve

The balance on foreign trade in nonmilitary merchandise continholdings are estimated at \$200 ued to improve, with the excess million. A large part of it has of exports over imports rising to been switched into yen by selling a seasonally adjusted annual rate spot dollars against the purchase of \$3.7 billion in the second quarter as compared to \$3 billion in the first quarter of this year.

The rise in U.S. net payments to foreign countries on transac-tions other than trade that had been evident in previous quarters continued in the second quarter, and apparently offset the increase though the remedy is in their in net receipts on the trade ac-

If it should suit Russia's the hour strikes it is quite ready more rapidly, but it should be kept in mind that a 10% per anthrough costs and the amenability that so much has come from so num gain in sales volume, for example, on a base of \$500 million of sales is \$50 million, whereas on a basis of \$200 million the smaller Although military demand for company would increase its sales only \$20 million, which might or not be "more rapid." To quote actual sales gains since 1955 to 1959 inclusive:

	Reynolds Metals (in mill	Alum Co. Amer.
55	 \$384.89	\$845.0
56	 405.21	864.4
57	 446.58	869.4
58	 445.55	753.1
59	 489.26	858.5

It will be observed that, whereas Aluminum Co. of America has just about held steady in this five year period, sales of Reynolds Metals have risen about \$105,000,-000, or about 30%. This clearly indicates that search for contributory factors is in order. Expansion by acquisition is generally most potent to these factors. To all intents and purposes, the exceptionally high costs of entering upon manufacturing virgin aluminum was a strong deterrent for many years. The numerous antitrust suits filed against Alcoa did not touch manufacture of the metal; the target was fabrication and none of the litigation springing from this situation proved happy in any way, economically petition. Yet, Alcoa had virtually been before the courts in restraining suits for 20 years. This situation came more or less to an end

Competition Making for Health

Effective competition has now been created and, as it usually does, a relatively healthy state of affairs exists. How beneficial it New Growth Possibilities will prove, of course, remains to It is necessary to point to these be seen when a period of business

	N	Earnings et after taxes	Net per share
1959		\$44,760,000	\$2.41
1958		39,360,000	2.24
1957		37,810,000	2.14
1956		41,240,000	2.57
1955		34,310,000	2.23

In view of the 5-for-1 split in 1955, 3-for-2 distribution in 1959 and minor payments in stock, the additions have been substantial.

Quality of Management

Management is, in all growth situations, a matter of primary concern. It is more than probable the management of Reynolds Metals, allowing for the youthfulness of the company and its consequent need to develop business wherever it existed, that its management has been considerably better on the trigger than has that of the largest company in the field. In any event, in production, in seeking out its supplies of alumina (ore of aluminum) and applications and discovery or creation of new outlets, the advantage has been with Reynolds Metals. The company is credited with being the one which first sold molten aluminum to larger consumers-General Motors and Ford Motor. It led the way in packaging, in home construction, in slum renovation, in auto engines and introduction of cans and numerous other uses. The company has predicted increased sales in 1960 over 1959 and is aboundingly cheerful over its long range future.

Such factors—once established and put into use, mean much more than long strings of figures. Crystal ball gazing does not rate highly in business quarters. Successful men in industry see much of the past, but less of the future. The younger men have little time to gaze on other than the future.

There is no doubt that the future of aluminum is ahead of it. Moreover, the paths to it are reasonably well-marked and do not need overmuch mapping. It is and offers a lifetime of sound, constructive work to young men. Even they, it can be said, haven't "seen anything yet" in aluminum.

UNION BANK, LOS ANGELES

Rapid growth characterizes the southern California operations of Union Bank. Located in an area where population growth currently appears to be at the rate of some 1,000 persons daily, Union Bank has been undergoing changes which have attracted the investment community nationally.

Until 1957, Union remained the only holdout among major Los Angeles banks for unit banking, unusual indeed in a state which permits statewide branch banking. Transition to "branch" banking has been carefully engineered in facing the problem of a public reputation in its area as "the institution with all banking under one roof." Rather than describing its expansion as branch banking, differentiation from competing banks is pointed up through the establishment of "regional offices with all banking under one roof." Suburban population growth necessitated the change.

The Occidental Savings & Commercial Bank, with three offices strategically located in the San Fernando Valley, was merged into Union Bank in September, 1957. A second regional office was opened at Beverly Hills in December of the same year; the permanent building, a new eight-story structure, was opened in the fall of 1959. Plans now are underway to extend its present five office network.

Construction soon will start on a regional head office in Orange County, adjacent to Los Angeles County. Also a new building will be operated and occupied at a strategic location on Los Angeles' Wilshire Boulevard. Long range expansion calls for the opening of several regional headquarters in southern California. This summer application was made to open its first office in San Diego.

The bank, organized in 1914 as a commercial and savings institution, adopted its present abbreviated name in 1958. A trust department was established in 1918 and the wholly owned Union Realty Co. was formed in 1958 to hold title to the bank's real estate. Union Bank has inaugurated many unique personal services to its customers. It also is among the largest lenders for interim financing of construction.

In order to stimulate deposit growth, the new method of computing 3% interest on savings accounts on a daily basis was started at the beginning of 1960. This policy has brought a substantial increase in savings deposits according to management. Particular emphasis is being placed on manpower development and work simplification programs. Installation of automation equipment for centralization of the bank's bookkeeping should be 100% complete by 1963.

During the past several years, Union Bank's growth record has been an outstanding one. Since 1955, deposits have nearly doubled and Union's growth, relative to the nation's other commercial banks, has been even more dramatic. Ranked 89th in size at the end of 1955 it has emerged as the 39th largest bank, measured by deposits at midyear 1960. Since 1955 assets and loans have doubled and capital funds have increased over 170% to provide a strong base for further growth. Investment interest has been allowed to widen with over 2 million of its authorized 4 million shares now outstanding.

A five-for-one stock split was executed in 1955. Rights subscriptions to stockholders were made in 1955 and 1956, followed by two rights offerings in 1959; the second one for some 260,000 shares after a two-for-one stock split in September. Stock dividends of 5.88%, 5.56%, 6.67% and 4% were paid in 1954, 1955, 1958 and 1959 respectively.

Earning power of Union is based heavily on loans; in 1959 loans provided 71% of gross income. Net operating earnings increased 36% during the first half of 1960 over the first six months of 1959. On the average number of shares outstanding for each

period, per share earnings were \$1.25 compared with \$1.11 for the year ago period. Dividend payout has been sharply increased from \$0.79 (adjusted) in 1959 to the current indicated annual rate of \$1.28 a share. At the recent price of 48, a yield of 2.7% is obtained.

Among Union Bank's promotion slogans for attracting customers is that of "A most unusual bank." Certainly from the growth achieved during the past several years, accompanied by a 300-400% rise in the market price of its stock since 1955, the stock of Union Bank also has developed into more than an ordinary investment.

AS WE SEE IT Continued from page 1

us regardless of the action of the Reserve authorities at this time, it would be difficult to level a charge of neglect or indecision or inaction at the System as politicians are very fond of doing. For our part, we have discerned no indication of sharply worsening conditions in the early future, and certainly do not believe that any failure of business to come up to expectations this year is to be attributed even in part to any hard money policy which the Reserve authorities had been following. Nor is there danger of an early recession that may now exist to be charged against the System.

As to the likelihood that the recent steps of the Reserve authorities will prevent a recession or help stimulate business to greater activity, we are content to await the verdict of future events. What disturbs us about the situation, as other situations of the same sort in the past have disturbed us, is not what the short-term effect of these actions upon business activity may be. What we can not help wondering about is what policies of this sort (in conjunction with other public policies) may do to the fundamentals of our economic system. It is, of course, only quite recently that the notion has been all but universally held that by manipulation of credit conditions and the like, the course of business could be controlled, and that it is possible to play fast and loose with banking and credit without doing heavy and permanent damage to industry and trade.

False Theory

The theory still does not appeal to us. Take the situation by which we are now faced, as an example. The steps now taken by the Reserve System must be designed to stimulate an increase in the debt of individuals and business. Otherwise, they could have no meaning. Yet the net debt of the governments, the business and the individuals of the country was already up to \$846 billion by the end of last year, which is more than twice what it was at the end of World War II. It was, moreover, more than half again as much as it was when President Eisenhower took office. If we look a little more closely, we find that consumer credit, so-called, stood at \$52 billion at the close of 1959, several billion higher than it has ever been in our history—and it is still rising. We find, moreover, that the mortgage debt of small home owners (that is on one to four family houses) had reached the staggering total of \$133 billion by March, 1960 or more than six times what it was at the end of World War II and 125% more than it was at the end of 1952.

All this comes forcibly to mind when day after day one reads or hears announcements of all sorts of consumer goods and even services for sale on credit with small down payments, or in some instances no down payments at all. In point of fact, it has come to be the common practice to quote not the price of an article but the amount of the down payment in sales campaigns. What this is already doing to our economy, we do not profess to know, but we must confess to very considerable uneasiness about the extent to which virtually all the consumers of the

August 24, 1960.

country are committed financially months and even years ahead.

We are not prepared to say to what extent such reduction in interest rate as have occurred or are to be expected from recent Federal Reserve action will tend to enlarge this already very heavy indebtedness. It is often said that the rate of interest charged consumers on installment debt does not greatly affect the readiness of the consumer to borrow. It is usually all too simple to change the number of payments or, in some other way, make an increase in the rate of interest charged difficult to discern. Presumably, the mere fact that the Reserve authorities take such steps as these tends to instill confidence in the rank and file, and thus to make them more ready to borrow or to enter into commitments. There is without doubt some truth in this view, although the psychological effect of such things as this is more likely to be felt in the business community than directly by consumers. In any event, it would appear that if such a policy does not encourage borrowing, it can hardly have very much influence upon the course of business.

Technical Aspects

Of course, there are technical aspects of a situation of this sort which are important, too. Procedures of this sort in current circumstances tend very strongly to raise bond prices and to give the bond market the ability to absorb more and larger offerings of new issues. Thissince nearly all outstanding issues are now callable—affords corporations the opportunity to reduce interest costs by refunding outstanding obligations. It also makes it easier for corporations to fund bank indebtedness. But is a situation created in this rather arbitrary manner really sound? It certainly does nothing to encourage saving from which investment must come.

In any case, we no longer live in a semi-closed economy, as our balance of payments difficulties in recent years eloquently testifies. Resumption of the outflow of gold since investment yields declined a month or two ago should put us all on notice that we can not play fast and loose with our credit system in fine disregard of what others may do.

STATE OF TRADE AND INDUSTRY

Continued from page 5 expected, Steel, the metalworking

weekly, said.

Unless there is a sudden shift in the purchasing plans of auto-makers, the September upturn in million in the first, 1.8 million the bookings and shipments may not be more than 5%.

As automakers delay steel order releases, other consumers-appliance manufacturers, farm machinery builders, and canmakers — are staying out of the market because they have big inventories of finished goods and more than

by barge-St. Louis, Kansas City, Louisville, Cincinnati, Memphis, and Nashville, Tenn.-expect the mills to ship by rail and absorb the difference in freight rates.

The problem in Detroit seems to be one of production planning, Steel said. Automakers know approximately how many cars they want to build, but they cannot decide what percentage of their output should be compacts. Until they do, they are in a poor position to specify the types and sizes of steel they will need. They are in no hurry to make up their minds because they know steel needs can be met on short notice.

Most of the car companies intend to introduce their 1961 models by Oct. 15, but they will go easy on initial production runs until their dealers unload at least half the one million 1960 cars jamming their showrooms.

than it was a year ago. Stocks are only 5% higher than they were in August, 1959. Look for the automakers to turn out 1.3 million cars second, and one million in the third).

Last week's steel production Furnaces were operated at 55.8% revised rate. Output: About 1,589,-000 ingot tens.

1,520,000 tons. A year ago the actual weekly production was placed at 332,000 tons, or *20.7%. At that time the industry was virtually closed down due to a strike of the steel union.

*Index of production is based on average weekly production for 1947-49.

Output of 1961 Car Models Moving in High Gear

Some 28,000 or 12% of the 235,000 cars assembled in the first three weeks of August were 1961 models, Ward's Automotive Reports said on Aug. 19.

Chrysler Corp. was the primary builder of the new models although Buick is producing the Special, a new medium-priced compact, in Flint.

Next week even more 1961 cars will be turned out, Ward's said. American Motors and Studebaker-Packard Corp. will begin 1961 output week of Aug. 22.

Meanwhile, car output in the week ended Aug. 20 plunged 43.5% under last week. Ward's said the sharp decline in production is the result of the industry's changeover shutdowns. U. S. auto makers produced an estimated 47,490 cars compared with 84,139 last week and 31,848 in the same week last year.

Ward's said Ford Motor Co. captured 46% of the week's production while Chrysler Corp. accounted for 35.2% and General Motors, 18.8%.

The statistical agency said only a few plants worked five days during the week. But Falcons and Comets were produced on a sixday basis. And 1960 volume resumed Thursday at Mercury's Wayne assembly site after a fiveweek strike.

Ward's pointed out that Chevrolet wound up its 1960 model run on Aug. 19. Thus, Ford Motor Co. is left building 1960 cars.

The reporting service said that U. S. truck volume soared 31.6% in the latest week. Total units were 16,385 vs. 12,449 last week. Reason for the upturn was that International Harvester and Willys International Harvester and Willys resumed operations after vacation downtime.

Freight Car Loadings for Aug. 13 Week Were 10.2% Above

SECURITY SALESMAN'S CORNER BY JOHN DUTTON

Know Your Customers

to a hundred poeple and the interested, chances are that you will come up with different interpretations from many of them. What is clear to you is often unclear to your customer. We communicate with words, and words paint mental pictures to us that are completely understandable, yet to others the ideas we are attempting to convey may be unintelligible. Be-cause of this ever present problem of communication, it is necessary for the security salesman to understand exactly what his customer wants from his investments.

There are also definite catego-Each unit consisted of \$100 of ries of speculators and investors. All of them buy and sell securities but the approach of a haphazard stock buyer and that of a as that of an Aborigine and a must first learn to judge your client. Here are the three main categories of specultors: most people who speculate would fit into one of these three major group-

The Busy Man Who Buys Securities for Capital Gains and Who Has No Well Defined falters out it goes. Investment Plan.

Many business executives, doctors, lawyers, and other professional people fall into this group. Often they are preoccupied with their business and profession. They want to leave it to someone else to do their investment thinking and their speculative hunching for them. They often act upon tips and the advice of non-qualified but well meaning friends for market advice.

The Professional Speculator Whose Objective Is Long-Term Capital Gains.

speculator and knows what he is doing. He has the ability to analyze trends, management, industries, and financial reports. He will buy any type of security, low or high in price, providing he can see an opportunity where the calculated risk warrants his making the commitment. He buys today intending to sell at a future date for a profit and he cares not whether the security is listed or market, or whether it is a con- next week.

tween people in this world is that rears, a common stock or a warwhat is often "cheese" to one is rant. Show him reasons for buy-"chalk" to another. You can write ing that will add up to more the simplest sentence and send it plusses than minuses and he is

The Professional Trader

This man is interested in trends. He will buy or sell securities that appear to offer opportunities for a trading profit. He usually does not initiate moves but waits until one has started then he jumps on the bank wagon. He uses the tape, charts, information, rumors and a feel of the market to guide him.

He cuts losses quickly if he thinks he has made a wrong guess. He expects to be wrong many times, but when he is in a situation that goes against him he closes it out and takes a small loss. If he latches on to a stock that moves and his profit increases he stays with it. He very seldom averages his bad ones. He buys more of the good ones. There are times when he may be out of the market completely and others when he will be very active. He does not become emotional about his stocks; he doesn't marry them or weep over them. They are just so many pieces of paper to him in which his capital is at risk and his purpose is to make a profit. If a stock does well he keeps it-if it

Conclusion

Before you can service such accounts you must first learn to recognize them. This is not difficult. Sometimes salesmen talk too much. The best way to service an account is to encourage your customer to talk to you about his objectives and ideas. Sometimes you can learn some things from customers besides sales psychology—they even know a little about speculating and investing. I've met some that knew a lot more than I did about some of these things. But seriously, This man is an experienced learn to categorize the people you meet and with whom you do business. There is a lot more to clientele building in the investment business than knowing how to analyze a balance sheet, understand floor procedure on the stock exchange, or know the SEC rules.

There are five principal categories of investors that every security salesman should also be able to identify. I will describe traded in the over-the-counter and name them in this column

PLYMOUTH SECURITIES

Monetary Policy in a New Economic Environment

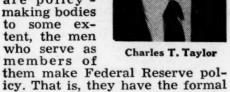

By Charles T. Taylor,* Assistant Vice-President, Federal Reserve Bank of Atlanta

Addressing himself to the question "Who Determines Federal Reserve Policy"? Mr. Taylor declares that since it must be adapted to the economic environment, the decisions of the consumer, businessman, and legislator all share the policy-making functions. Shows why inflationary pressures have persisted, taking in new roots during World War II. Also notes important effect of the prevalent "inflation Psychosis," which has assumed a never-ending price rise, overlooking the post-war increases' result from a special set of demand and supply conditions. Notes current subsiding of such pressures. Concludes that he who would predict Reserve policy must forecast economic changes, reflecting how Americans manage their affairs.

Who determines Federal Reserve ings were 25% of disposable inthe Federal Reserve Act, which

sets out formally the responsibilities and powers of the Board of Governors and the Boards of Directors and officers of the Federal Reserve Banks. Since all these are policy making bodies to some extent, the men who serve as members of

Although there were three times during this period, in 1948when policies were designed spetendencies in the economy, each

Desire to Spend and Ability To Pay

The inflationary pressures had their roots in World War II. Experience had shown that any In this economic environment, country engaged in a major war Federal Reserve policy sought to is likely to have such pressures, hold demands within the capacity controls and rationing were moderating the growth in the started as soon as the United money supply. The world's ex-States got into the war. These perience had shown that continu-

monetary and credit policy? Part come, whereas before the war of the answer may be found in they had averaged about 4%. the Federal Reserve Act, which Meanwhile, consumers reduced their debts

Thus, when controls were removed after the war ended, consumers could finance their spending by using their accumulated savings, by spending their current high incomes, and by going into debt. Because they had not been able to buy all the goods they wanted during the war, their accumulated demands were great and they called on all these sources of purchasing power. In this situation, rising prices did to discourage consumer spending. Consumption spurted upward, until in 1947 it nearly equaled current income.

Corporations and other businesses and state and local governments also had postponed spending during the war. Consequently, corporations were in an extremely liquid position; their cash and government securities had built up to 70% of their current liabilities. Continued prosperity, more-over, enabled them to use internal funds to pay for a large part of necessary in the expanding economy. State and local governments used up surpluses built up during only the United States could sup- rise in prices was inevitable.

Limits to Supply and Production

Increases in supply, of course, 49, in 1953-54, and in 1957-58, were limited by the economy's ability to increase production. cifically to offset recessionary Much of the manufacturing capacity created to fill wartime needs time once recovery was gain un- did not satisfy peacetime dederway, policy-makers were faced with an inflationary economic environment.

Caracter recovery was gain the did not satisfy peacetime decomposition of the control of the c production, this program added to the demands for the nation's resources without increasing the supply of goods.

which was one reason why price of the economy to supply them by helped keep spending down, but ing inflation had never resulted because incomes continued to in- in orderly economic growth. Thus, crease, savings built up rapidly. limiting, so far as possible, infla-In 1944, for example, current sav- tionary pressures would not only

help achieve a stable dollar but prices were to rise indefinitely it consumers pay for services and would also foster economic seemed prudent to seek protection rents have continued to move growth. The Federal Reserve against inflation and to neglect higher, prices of goods they buy design policies that would help offset some of the effects of the powerful inflationary forces, an economic environment that was one of the heritages of World War II.

Except for use of selective controls and voluntary restraint, the aims of any policy adopted by the Federal Reserve System can be achieved only as it influences the availability and cost of bank credit by controlling member bank reserves. Consequently, although the Federal Reserve System could adopt policies designed to influence the growth in the money supply - demand deposits and currency—it could not di-rectly influence the use of that money supply. Thus, in the post-war period demand pressures pushed toward a more active use of the money supply. In addition, activities of lenders helped increase spending. Consequently, the use of the money supply rose steadily as is indicated by the turnover of demand deposits.

With deposits high and loans relatively low in the earlier postwar years, commercial banks were both able and willing to increase their loans. They could convert their large government security holdings into higher yielding loans without loss so long as the wartime policy of supporting a fixed pattern of interest rates was continued by the Federal Reserve System. Mutual savings banks, insurance companies, and other institutional lenders who also had acquired large amounts of government securities could sell them and is now at an all-time high, at par on a market supported by the Federal Reserve to make has undoubtedly greatly demortgages and other types of creased. Corporate liquidity has loans. Until interest rates were now been reduced to what is conallowed to respond freely to the sidered a more normal level. Alsupply of and demand for funds, the effectiveness of any Federal Reserve policy was limited.

Although this situation was relieved by the Treasury-Federal form their normal function, other inflationary pressures persisted.

Inflationary Psychosis

After losing a considerable part of the purchasing power of their throughout the world. savings by continued rises in war period began to try to protect total index this year reflects nearincreases. Thus, they reasoned, if commodities. Although prices ners in Carr, Logan & Co.

important under other circum-

Some persons sought protection by buying real estate without regard to current returns. Others who turned to the stock market were more interested in possible capital gains than in current yields. Such seeking of protection against future price rises influenced decisions on inventory and capital expenditures. Labor, seeking protection by way of escalator price indexes, found the resistance of some businessmen weak because the latter believed they could pass on increased costs through higher prices.

What was overlooked in this period was that the conditions generating price increases could be traced to a special set of demand and supply conditions. In this sort of an economic environment, however, Federal Reserve policy had to give continued emphasis to preserving the value of the dollar.

A Changed Environment

Meanwhile, the economy was steadily changing and some of the inflationary forces were losing strength. As spending gradually became geared mainly to satisfying current demands, consumer income and consumption trends became more parallel, and consumer saving, the difference between the two, assumed a more normal relationship to income. Consumer debt rose year by year and thus its potential expansion though still high, national defense spending has deceased in relative importance to Gross National Product.

At the same time, the economy's Reserve Accord of 1951, when incapacity to produce the goods terest rates were allowed to perneeded to satisfy demands has To Be Harris grown steadily; one measure of Logan & Co. greater increase in output than in the number of production workers expansion has increased capacity to produce major materials not only in the United States but

Price developments reflect these

higher, prices of goods they buy policy-makers' task then was to some considerations that would be have been stable, on an average, since early 1958. Prices now move up and down in response to current demand and supply situa-tions, not to general inflationary pressures. Price competition is returning as more and more sellers try to attract buyers by means of offering attractive prices. One result is that an increasing part of the public apparently has lost its faith in the doctrine that inflation is inevitable.

> With a great deal of excess clauses tying wages to consumer liquidity squeezed out of the economy, with interest rates free to fluctuate, with the expansion of bank lending tied more closely to the availability of reserves, and with the investment policies of financial institutions geared more closely to the inflow of funds from savings, the economy has become more sensitive to monetary and credit policy changes. In this economic environment, less emphasis may need to be given to policies designed to limit inflationary pressures. The easing of credit so far this year, reflected in lower short-term money rates and easier reserve positions of member banks, reflects changes in the economic environment.

Has the economic environment changed so much that the money supply is no longer excessive as it was in most of the postwar period? He who would give a firm answer to this question at this point would be foolhardy indeed. But if the answer is Yes, monetary policies will reflect these changes as they have reflected changes in the economic environment in the past. Thus, he who would predict Federal Reserve policy must predict economic changes, changes that in large part reflect how Americans man-age their economic affairs.

Opportunities for Credit Sales in the '60s and '70s

By Cyril J. Jedlicka,* Senior Vice-President, City National Bank & Trust Company of Kansas City, Mo.

Authority in bank consumer credit expresses satisfaction over revised 1960 expectation as a year of "moderate expansion" in lieu of previously prophesized runaway boom. Pointing to constructive improvement in auto situation, reflected in sales gains, inventory reduction, and better credit delinquency status, Mr. Jedlicka maintains these trends along with consumers' optimism correlated with their rising incomes indicate opportunities for credit sales that will stagger the imagination throughout the 1960's. Endorses predictions that consumer credit outstanding will increase to \$60 billion by 1970, and approximately \$100 billion by 1980, with the banks obtaining their full share of the business.

decade immediately ahead wascommonly referred to as the Soaring '60s. A record year was predicted for automobile sales as well as for most lines of business.

Some Recent Impressions Of Western Europe

By Alan D. Whitney, Investment Advisor, Winnetka, Ill.

A warm retrospective look at the roots of Western Culture starts with Greece and ends with Britain. Mr. Whitney focuses on the bygone as a point of reference and his paper weaves the past with the present and reflects the pleasure that comes from looking back knowledgeably.

Anyone who goes to Europe to Naples and working northward, the roots of Western Civilization, one also follows a chronological misses the most fundamental one

of all. There-fore, if this basic country is to be viewed, it is also wisest to begin sightseeing there and then travel northward, not only following the movement of Western Culture geographically and chronologically, but also following the

Business Outlook Survey Reports Good Year Expected

Optimism about the direction of this year's economy is revealed in National Industrial Conference Board's mid-year survey of 210 manufacturars. Orders are expected to increase and inventorias to become smaller.

Despite its somewhat unsatisfac- fore-tax earnings in 1960 to be tory beginning, 1060 is still widely better than those for 1959; 16% expected to be a "good year," the expect to equal 1959 figures, and National Industrial Conference the remaining 23% expect earn-Board now reports in releasing ings to drop this year. Cooperators' expectations now Cooperators expectations now conditions for the remainder of spondents for failure to meet car leasing firm. For 13 years pre- H. C. Wainwright & Co., 60 State during the early months of the the year and the resulting in- year-end forecasts were weather, viously, he was President of Street, members of the New York year, when shipments and orders crease in sales. were below forecasted levels in more than half the companies reporting. Nevertheless, many executives are confident about the second half, basing this attitude on a belief that the economy is healthy, and on a faith in the capacity of their firms to compete.

A few firms' expectations, however, tend toward pessimism. Others are unable to find causes leading to improvement. Some of these companies have already curtailed operations, and further curtailment is planned unless orders recover promptly.

Other Reasons for Optimism

Among the reasons cited by those NICB cooperators who express optimism about second-half 1960 are:

Some of the order volume looked for but not received during the first half is believed to have merely been delayed.

Completion of inventory adjustments that have particularly affected primary metal producers is thought likely to increase demand, as customers then will need to make purchases to meet operating requirements.

New models and new products are expected to stimulate sales in a substantial number of companies in industries ranging from aircraft, instruments, chemicals, and office equipment to furniture and

Orders Expected to Increase

The expected improvement in business during the second half of 1960 is reflected in the outlook for new orders. Sixty-three per cent of the firms cooperating in the Conference Board survey predict that last-half bookings will show an increase over those of the same period in 1959. Nineteen per cent believe order volume should be about equal to that of the last six months of 1959, while 18% feel that new orders will decline below the last-half 1959 level.

The trend in survey participants' replies on billings approximates that for new orders. Comred with the last half of 1959, billings for the same six months of this year are expected to be higher in 70% of the companies, with the expected increase averaging approximately 12% among the firms indicating the amount. Another 14% of the cooperators expect billings to equal those of the year-earlier period, and the remaining 16% forecast a drop.

Inventory Reduction Seen

Fifty-two per cent of the participating firms expect dollar inventories to be smaller than at present by the year's end, but the average anticipated change is very slight. Twenty-five per cent of the cooperating companies report inventory levels are likely to hold, while 23% foresee an increase. A substantial share of the changes will be owing to seasonal factors, especially in some of the nonmetal products firms.

Sixty-one per cent of the NICB respondents expect over-all beEarly 1960 Results

Mr. Koehler, was President of BOSTON, Mass. - John L. Mc-

The unique application of the X-Ray Quantrol*, now in use at Anaconda, Montana, can sample and assay copper values in approximately two minutes. By contrast, previous methods took anywhere from 2 hours to 2 days. As a result of this important speed-up, it is now possible to obtain far more reliable data, contributing to improved extraction of metal values from the ore.

The Process Control System developed by Anaconda, is one of many ways by which the Company constantly improves quality and expands basic knowledge about nonferrous metals. For another example, look to The American Brass Company, a 100% owned subsidiary of Anaconda. The Brass Company has recently broken ground for a \$1,500,000 research center in Waterbury, Connecticut. Facilities will include metallurgical, corrosion and chemical laboratories in addition to equipment for experimental production. This opens the way to new, significant advances in the area of product development.

All along the line, through extensive mineral exploration and geological investigations, as well as through laboratory research, Anaconda keeps pace with industry's ever-changing requirements. As new applications for nonferrous metals multiply, so does the need for a constant and dependable supply.

Through Anaconda, these demands are met not only in quantitative terms, but qualitative as well, with a continuing supply of copper, brass and bronze precisely suited to specific product requirements, including those in the minds of men as well as those on the board and in production.

*Quantrol is an Applied Research Laboratories trademark.

BY ROBERT E. RICH

The Cost of Capital Management

lates that investors pay about \$300 million a year for "the care and nourishment" of the \$16 billion entrusted to the managers of this rish treasure. Costs go to pay the salaries of fund salesmen, management fees, brokerage charges incurred by the funds in the course of trading and numerous

If we accept the \$300 million figure (lumping in the one-time commission is at least debatable) then it would appear that American investors are paying nearly 2% annually for the management of the capital they have entrusted to mutual funds. Says the industrious editor: "This is fairly costly capital management."

No doubt, many investors, far from satisfied with results obtained for them by the managers of their funds, will endorse that judgment. But it is equally certain that other folks, who never were able to attain satisfactory results on their own, will deem the cost reasonable enough when measured against the sizable growth of their original investment. As for those people who were converted to mutual funds, only after suffering disasters by going it alone, they must appear to be a genuine bargain.

Surely, a purchaser of stocks who has been the victim of churning would agree that, by comparison, mutual funds are cheap. And the man who has succumbed to boiler-room blanishments should be ecstatic. Also, the fellow who made a trip to the cleaners in 1929 and/or 1937 could reasonably argue that they're cheap. And, in more recent times, the people who bought ballyhooed "glamour is-sues" that had little more in the way of assets than bunsen burners might decide they're cheap.

A survey of folks who have been in the market, both on their own and through funds, would surely turn up some valuable

We have attempted, in our own small way, to make a contribution to the subject of capitalmanagement costs. We have gone to the people who make a profession of investment counsel and age an individual portfolio. A half century-old service, offers this scale of fees and says it is of 1959. fairly typical of the fraternity:

An annual charge of 1% to Scudder, Stevens & Clark Fund manage a portfolio worth less reports net assets at Aug. 15 to-than \$66,000, but the minimum taled \$77,922,662, or \$18.73 a share, And Shiffman fee of three-quarters of

Thus, a \$25,000 portfolio would incur a yearly charge of \$500. That's 2% and a shade higher than the estimated price the holders of mutual funds are calculated to be paying. Nor would such a portfolio, or for that matter one many times as large, provide the diversity that a stake in one of the

representative funds assures. More to the point: the median holding of the 3,300,000 mutual \$4,171. So the investment counselor's fee rules out the people who have turned to mutual funds. Incidentally, we have not included the approximately 1,300,000 accumulation plans, where the median holding is a mere \$1,890. Such holdings, invested individually, would not be likely to include a stake in Minnesota Mining & Business Machines, Polaroid and

And the device of lumping in son, Hammill & Co., New York,

One of this country's hard-work- the one-time bite of the salesing financial editors, who keeps man's commission in figuring the close tabs on mutual funds, calcu- cost of fund management is open cost of fund management is open to question. Assuming a severe business depression and a market panic, it's a reasonable expectation that fund sales would dry up. This, of course, would bring down the cost, as figured by the editor, but it would hardly be the investor's idea of a bargain. The fellow heavily invested in mutual funds would doubtless be somewhat happier with a burgeoning economy and a public scramble to buy in, even if these commissions did cause "costs" to soar.

Arthur Wiesenberger (Mr. Mutual Funds) expects that over the next 20 years the \$16 billion mutual fund field will become a \$100 billion Colossus. By its very nature, the business should not incur proportionate costs, particu-larly if one subscribes to the oftlittle more to run a big fund than a medium-size fund.'

The fact is that this is rather a new business. Looking back 20 years, its total assets were less than a half billion. More, rather tries have been around for more Institutional Income Fund, Inc. these are still striving to cut costs. Primarily, a housekeeping operation, the mutual funds have luckily developed in an era of automated office equipment, which should contribute importantly to heightened efficiency.

Meanwhile, it can be argued in some quarters that on a purely statistical basis, investing by way as more than neophyte or professional for that matter, has discovered: "Cheap is dear," not to mennothing is generally worth exactly what it costs.

means 47% longer life

Just since 1940, life expectancy in Puerto Rico has risen from 46 to 68 years-or over 47%! The death rate has dropped from 18.4 to 6.8 per 1,000 people. To a considerable extent, these amazingly rapid advances in human welfare reflect the successful efforts of the Puerto Rico Aqueduct and Sewer Authority to supply pure water and modern sanitation throughout the Commonwealth.

Every town and city in Puerto Rico today has a constant, abundant supply of safe drinking water at low cost. The average charge to residential customers for both water and sewer service is around \$2.50 a month!

Annual gross revenues of the Aqueduct and Sewer Authority have more than quadrupled since 1945, rising from less than \$2 millions to nearly \$9 millions. Revenues cover principal, interest and reserve requirements almost 21/2

The bonds of the Puerto Rico Aqueduct and Sewer Authority are well secured and fully exempt from Federal and State income taxation. These sound investments, at current prices, provide an attractive return to individuals and institutions. A booklet describing this Authority is available upon request.

extreme views and conclude that structure of the debt. the debt cannot be successfully managed in the public interest by rigid adherence to any single formula or guideline. Rather, we take into consideration all of the objectives that I would like to sold on an interest-bearing basis; various objectives and guidelines in reaching each decision.

The Need for Varied Objectives Why don't we accept any single

objective?

The answer is, I believe, demonstrable if we take a closer look at the extreme views. Those who argue for putting out only long-term bonds in periods of expansion and short-term securities in recessions ignore the practical difficulties. It would be both impossible and undesirable to adhere strictly to this view. After all, the Treasury has to have funds to meet the government's fiscal requirements, and this at times means that a pressing need for cash may force the Treasury to market short-term issues - for which there is usually a substantial demand - even when the economy is expanding rapidly.

On the other hand, the constant softening in the maturity of the public debt means that the Treasury must take advantage of every reasonable opportunity to issue long-term securities. From a purely housekeeping standpoint the Treasury needs to do some tions permit. This does not mean, however, that the Treasury can ignore the ecoonmic effects of the debt structure and extend maturi-

Chart II shows have amounted to \$1.1 trillion. how these structural relationships sequences postponed—for either a sold to long-term investors in the have been changing since the end

Simply stated, the Treasury's major debt management problem on June 30, 1960 of \$2861/2 billion. is that, merely because of the passage of time, the short-term debt is continually growing and

Thus, the under-one-year debt was \$601/2 billion at the end of 1946. By the end of 1953 it had of \$1.1 billion for the fiscal year risen to \$80 billion, where it also stood on Dec. 31, 1959. By June The importance of accumulating 30, 1960 the under-one-year debt prise you by saying that we are an under-one-year debt in the \$70 economy call for a very shortterm debt of this size. Moreover. the fact that about \$26 billion of this short-term debt is in Treasweekly auctions significantly lessens the market impact.

The Treasury is greatly con- offer of the Secretary of the Innexty cerned, however, about the rapid growth that has occurred in the as shown on the center bars of (Chart III). These maturities rose from \$24½ billion in 1946 to \$33 billion in 1953 and by June 30, 1960 had increased to more than twice the 1953 total. As time goes by, and unless meaningful debt extension is achieved, more and more of these securities will tumble down into the less than one year category.

Meanwhile, the five year and over debt has been shrinking rapidly, dropping from \$971/2 billion in 1946 to \$471/2 billion in 1953 and \$401/2 billion at the end of June 1960. This is the area, of course, which we were unable to enter during the recent period of strong credit demands and relatively high long-term interest rates. Until recently, the 41/4 % interest rate ceiling, which Congress has been unwilling to remove, has effectively locked us out of the long-term market and into the short-term sector.

A Crucially Large Maturity

The Advance Refunding Benefit

Let me emphasize again that here is where advance refunding can perform a real service. It is easier to keep a satisfied customer -than to wait until he is dissatisfied and then try to sell him something else.

Up to now, I have been focusing attention on our marketable obligations, since that is the area where there is greatest scope for furthering our general debt management objectives and, in particular, for improving the structure of the debt. However, I do want to discuss our savings bond program, which is one of our most important fields of endeavor. Chart VI shows why this is so.

As you see on the chart, our only major success in selling

tional investors and those individuals who do not normally pur-What we would like to do, of chase savings bonds. We are, in years amounted to \$117 billion. This total has shrunk to only \$60 billion. During this same period of time the total amount of VA increased from \$6 billion to \$62 billion, not to mention other forms of Federal agency and public housing debt which are aided substantially by the Federal Government. We also face understandably tough competition from the securities of State and local governments which are, as you know, exempt from Federal taxation. The expansion of State and local issues outstanding from \$16 billion in 1946 to about \$67 billion at the present time has provided the tax-exempt market with a constant flow of new, attractive issues.

> The success of the savings bonds programs in contributing not only to a better structure of the public debt but also in contributing to better thrift habits among millions of Americans is due in large part to the splendid cooperation of thousands of volunteer workers throughout the country. Commercial banks provide a large

The Alternatives Ahead

In contrast, savings institutions people expected to be added to

The savings bond program, parthe car that you finance. The United States could ill do without the savings bond program, both In the last analysis, of course, from the standpoint of sound debt management and as a contribution to a healthy, growing economy.

I should now like to return for a moment to the debt management Treasury might achieve several technique which I described earlier as "advance refunding."

whole idea of advance refunding. that it can produce the maximum five to ten years as we did in the debt extension with the minimum of market disturbance and distortion.

First, I might mention that the Treasury, as noted earlier, did refund some of its 1972 maturities in advance when it issued the 23/4 % Investment B bonds back in 1951. Thus, some precedent already existed on this score. On the other hand, in the interim period advance refunding had not been possible because most of the institutional investors engaging in such operations would have had to incur a loss on their books to participate in such an exchange. Many of them were understandably reluctant to reduce their surplus in this manner.

This situation was remedied however, by new legislation passed about a year ago, which permits advance refunding to be engaged in without recognition of capita gain or loss, thereby making such an exchange more attractive to many investors. Paradoxically this legislation was designed prilonger-term securities in recent share of these volunteer activ- marily to induce exchanges by years has been to the small in- ities and sell a large volume of nontaxable or partially taxable investors, regulated by State authorities, rather than taxable institutions. Our study had indicated that such authoriites would be willing to permit such exchanges with postponement of recognition of capital gain or loss, provided that a change in the Internal Revenue Code established a precedent. Although the change in the Code enacted last September is believed to have removed this obstruction to advance refunding, the Treasury has not been able to make full use of the technique because of the limitation growing out of the 41/4 % interest rate ceiling, which in this case must be applied to the cost of the debt extension to the Treasury. With the recent decline in interest rates, however, the time may be approaching when a significant amount of advance refunding can be undertaken and some meaningful debt extension can be achieved.

When the Treasury offers a long-term bond for cash, it captures funds that would otherwise be available for other types of long-term securities. For that rea-B-1375-A-1 son, cash issues have been infre-

Advantage Over an Investment Trust

The investments of an insurance carrier are of primary importance to the investor, for it is from their earnings that he receives his dividend. Legal restrictions on the investments of insurance carriers are harsh and result in the establishment of a diversified portfolio similar to that of an investment debasement threaten us, the ans- ment of initial capital are usually wer of the easy money advocates much more stringent that those probably will be the shackling of regulating the investment of surfreedom with a network of con- plus and reserves, though in trols, enforced by an all-powerful either case security of the principal is exacted.

Weathers Business Cycle Better Than Shares

While insurance stocks follow 1960.

industries to undergo a period of rapid growth, reach a decade or two of conservative maturity and then decline, insurance companies have demonstrated an ability to perennially grow in a somewhat evolutionary manner. Few indus-tries can claim such a long unbroken record of dividends, a record of which the insurance enterprise can justly be proud. The insurance carrier affords the basis for our modern highly organized credit economy and deals, like banks, in money as an extremely liquid asset.

The outlook for the business is, in the future as in the past, bright. New coverages are constantly being necessitated and the public is becoming increasingly aware of the need for insurance. Legal restrictions designed to protect the policy-holder have the dual effect of stabilizing the business in the interest of the investor. The nature of the business itself is conservative and functions as a shock absorber for distortions in the economic world. In short the investor in insurance is purchasing share in one of the world's largest and most stable enterprises, a business which throughout the ages has weathered every major war, panic and depression.

Earnings for stock fire and casualty companies are now in a strong uptrend. As a result of rate increases granted by state jurisdictions, underwriting experience, which deteriorated alarmingly in 1956-58 has again turned profitable. Although the first quarter of 1959 was, from an underwriting standpoint, one of the worst on record, the second half of 1959 indicates strongly that the indus-try has regained a profitable position.

Improved Underwriting Experience

of underwriting expenses to premiums written has undergone a long term decline from a high of 45% in 1932 to a low of 36% in 1959. Such recent innovations as the machine-writing of policies, should result in a further reduction in underwriting expense.

Muses Over Disquieting Factors

There are however several disquieting factors in this otherwise bright outlook for the stock fire and casualty companies. While increased corporate dividends and a rise in the average yield on bond portfolios will result in sharply higher investment income during 1960, many of the blue-chip industrial shares which these companies hold in their portfolios are distinctly overvalued. Some adjustment in industrial shares has downward adjustment in industrial shares this year could result in a net decline in assets for 1960. Another much more disconcerting factor is that in general the old line stock fire and casualty industry is dominated by staid ultraconservative management which in turn has infiltrated the industry with low-cost uncreative and in too many instances inefficient personnel. Much of this peor calibre personnel has now penetrated the middle management positions in these companies.

As a result the younger more aggressive specialty writers have, through modern merchandising, rigid underwriting and a strong safety program, obtained an increasingly larger percentage of the outstanding business. Their inroads are particularly apparent in automobile and workmen's compensation lines where they not only have gained the highest percentage of business but have, through dividend payments and merit plans, also obtained the most desirable classifications of trained personnel whereas the ten, were mainly responsible for engineering departments of many stock fire and casualty companies are dominated by inspectors with little or no training in engineering. Such personnel, by dearth of tively evaluate the occupational of these claims and have per- hazards involved in complex profit position. Workmen's com- mon to large workmen's compen-

tional rate-hikes are granted no industry ever hopes to regain the upholding the rate deviations of the North America Companies and the resignation of the Travelers from full membership in the National Bureau of Casualty Underwriters may be a few of the factors which will serve to jolt the industry from its long term complacency.

Need for Careful Choice

From an investor's standpoint it is important to place funds in offering unusual security, a sub- mium volume, an increase in those companies which have demonstrated an ability to grow not only in investment income but also underwriting-wise. It is imeffect a still further advance in portant that a company can effectively compete in its insurance years to come. operation by the acquisition of a In addition to improved under- profitable and expanding volume many years has recently been in security prices, they withstand writing results and rising invest- of business. Although it is the pattern of most increase earnings of the stock records, which over the years outstanding. Dividends have been

ried forward and applied to future merchandising program. Such underwriting profits. The ratio companies, despite their high dividend yield, are to be avoided in favor of large aggressive carriers with highly competitive merchandising programs.

Companies which demonstrate that they can grow underwritingdirect billing and automatic ex- wise, both in volume and profit, perience - rating of large risks afford the best long-term investment. The companies, enumerated below, have been selected from among the many because of their long stability, aggressive management and an expanding volume of business based upon sound underwriting and merchandising techniques.

Aetna Casualty Surety Company, Hartford, Connecticut

Aetna Casualty and Surety Co. is an old time-tested company dating its founding to Hartford, Connecticut in 1883. In 1907 the company was reorganized and effective Jan. 1, 1956 the Automoalready taken place during the bile Insurance Company of Hart-first half of 1960 but any further ford was merged into Aetna Casualty and Surety. Together with its wholly-owned fire and marine affiliate, the Standard Fire Insurance Company, Aetna Casualty writes all types of insurance except life but the bulk of its premium volume is in casualty lines. It operates about 70 general agencies and branch offices from coast to coast and is represented by over 20,000 agents both in the United States and in Canada. Aetna Life Insurance Company, the parent company of the Aetna Life and Affiliated Companies, owns 61.6% of the outstanding stock of the Aetna Casualty and exercises both control and management of this firecasualty affiliate.

During 1959 admitted assets of the Aetna Casualty and Surety increased to \$690,156,000 from \$616,850,000 in 1958, premiums written increased to \$339,033,000 from \$306,771,000 in 1958 and premiums earned increased to \$322,567,000 from \$294,351,000 in 1958. In 1959 statutory underwritshowed steady improve- business. The engineering de- ing profit was \$2,472,000, net inpartments of the specialty writers vestment income \$15,276,000 and are fully staffed with college policyholders' surplus \$227,-372,000. Combined loss and expense ratio in 1959 was 97.4% down from 98.0% in 1958.

Premium volume is divided 30.3% in fire and property lines, 69.5% in casualty lines and 0.2% training, is ill equipped to effec- multiple line. Automobile coverages account for 44.7% of total premium volume, being divided in 11.1% for Automobile Physical Damage and 33.6% for Automobile Liability. Even during the If the stock fire and casualty most difficult periods of automobile underwriting Aetna Casualty has given a good account of itself and indicated above average risk selection. Although Workindulge in careless financial prac- which often times exceed the con- every indication that the improved commissions, modernize its entire tices which can only end in erod- tributed capital. In addition, the underwriting position of the insystem of operations and initiate volume, Aetna Casualty is one of the contract the few stock casualty companies effectively geared to the writing and servicing of retrospective risks.

Assets are divided 69.3% in cash, receivables and bonds; 30.7% in stocks, real estate and miscellaneous. Since over 61.2% of total assets are in high grade bonds and preferreds and only 26.3% in common stocks, this company is in an excellent position to sustain a period of business readjustment. With the combination of a sound, efficient underwriting program and a strong investment portfolio, Aetna Casualty should continue to prosper both from an underwriting and investment standpoint in the

half, owing in part to lower prices for synthetic fibers, particularly nylon, the magazine continues. The textile industry, it is pointed out, accounts for about 30% of Du Pont's sales volume.

The American Cyanamid Company's sales and earnings for the first half of 1960 are the highest in the company's history, the report says, even though the second quarter earnings were \$11.9 million as compared with \$14.1 million for the same period in 1959.

Cyanamid explains that the record sales for the first quarter of 1960 resulted from the then high level of general business and higher than average sales of antibiotics. The concern's secondquarter drop is regarded as in keeping with the lower business level and seasonably lower pharmaceutical sales.

Both the Monsanto Chemical Company and the Hooker Electrochemical Company experienced lower net incomes for the first half of 1960, as compared to the same period in 1959. They attribute the decrease, says the report, to lower selling prices and to higher business costs, such as increased research, development, marketing and engineering expenses, and higher costs of labor and materials.

Companies which have enjoyed sharp increases in net income, according to Chemical and Engi-neering News, include the Dia-mond Alkali Company with a 23% gain in the 1960 six-month period over the same period in 1959, and the Koppers Company, Inc., with income up 45% as a result of more business in its engineering and construction division. The Commercial Solvents Corporation reported a 90% earnings increase, partly because of the discontinuance of write-offs against its investment in Northwest Nitro-Chemicals, Ltd., a Canadian af-filiate. The Wyandotte Chemicals Corporation also gained in sales during the first half of 1960, and still has surplus capacity, says the

Building Firm's Stock Offered

Vickers, Christy & Co., Inc. and First City Securities, Inc., both of New York City offered 60,000 shares of Commonwealth Development & Construction Co. common stock (5 cents par) on July 25 at a price of \$5 per share.

The proceeds of the sale, estimated at \$225,000 after payment of underwriting expenses will be used for the purchase of 73 acres of additional land for development, road improvements, materials and supplies, and the balance of the proceeds for working capital.

The company is presently engaged in the construction of a housing project to consist of 100 single family homes in the Perkiomen Valley, Montgomery County, Pa. Its offices are located at 11th and Main Sts., Penns-

Of the authorized 500,000 common shares, 137,000 shares will be outstanding at the completion of this offering.

Chemical Industry's Rising Sales With "Hot and Cold" Earnings

New decade's "shaky" start, and impending disappointments to industry's shareholders, asserted by "Chemical and Engineering News." Current and comparative sales and earnings showing of individual companies analyzed, with impact of possible late-summer upturn in steel industry weighed.

the first half of 1960, but "earnings are blowing hot and cold as gineering News.

that the lower profits are due to the higher cost of doing business today. Others point to downturns in the metals, building, and other industries," the magazine asserts, ration, however, second quarter continuing:

"There should be some consolation in the fact that most chemical compared to high levels estab-

lished during a recovery year." are headed for record levels and steel industry. zine observes.

Chemical industry sales rose in Impact of Possible Steel Industry Upturn

A late-summer upturn in the the industry wades through this steel industry, it is pointed out, post-recovery year," reports the would mean a substantial gain current issue of Chemical and En- over 1959 for the Allied Chemical Corporation, which already has set In about half the companies re- sales and earnings records in the porting on the six-month period, second quarter of this year, at profit margins are lower this \$216.9 million and \$0.83 a share, year than in 1959, according to respectively. Allied has reported a the American Chemical Society strong demand for nitrogen ferweekly. "The new decade is off tilizers and gains in sales of urato a shaky start, and the results nium hexafluoride, caprolactam, will disappoint many stockhold- nylon fibers, pigments, and fluoroers. Several managements explain carbons over the 1959 second quarter, although the building materials season "continues to be disappointing." For the Union Carbide Corpo-

sales of \$376.3 million were lower FT. SMITH, Ark.-Jones & Comthan both the \$395 million figure for the first quarter of 1960 and firms are turning in record sales the \$396.5 million for the second for the first six months, which au- quarter a year ago. The latter gurs record annual sales. Also, the figure was an all-time quarterly profits for the first half are being record for Carbide, which explains that it reflected abnormally high steel operations in anticipation of The chemical industry can draw the steel strike. The decrease in encouragement, too, from the fact sales and earnings for the second that economic barometers such as quarter of 1960, it is explained, John Makes has become associated gross national product, personal resulted mostly from lower sales as a registered representative with

9.5% compared to last year's first firm.

Securities Now in Registration

NOTE—Because of the large number of issues awaiting processing by the SEC, it is becoming increasingly difficult to predict offering dates with a high degree of accuracy. The dates shown in the index and in the accompanying detailed items reflect the expectations of the underwriter but are not, in general, to be considered as firm offering dates.

• Admiral Homes, Inc. (9/26-30)

Consolidated Edison Co.
May 15 it was indicated by H. C. Forbes, Chairman, at the annual meeting of stockholders, that common stockholders may get rights to subscribe to convertible debentures or common stock in the Fall. This type of financing would be contingent upon the ability of the company to get its presently outstanding 4% debentures converted into common stock. Con Edison this year will spend about \$225,000,000 on new construction compared with \$222,000,000 in 1959 and \$189,000,000 in 1958. For the five years through 1964, Mr. Forbes estimated that the utility would spend \$1.2 billion for plant expansion. To finance the five-year program he said the company will have to issue some \$800 million of securities of one kind or another.

Consumers Power Co. April 29 the company asked the Michigan Public Service Commission for permission to issue and sell securities with base value of \$73,101,600. The company proposes to issue and sell first mortgage bonds in the amount of \$35,000,000 maturing not earlier than 1990 for the best price obtainable but not less favorable to the company than a 51/4 % basis. The mortgage bonds are expected in the last quarter of the year, perhaps in October. Proceeds—To be used to finance the continuing expansion and improvement of the company's electric and gas service facilities in a 65-county area outside of Greater Detroit. Underwriter—To be determined by competitive bidding. Probable bidders: For bonds-Halsey, Stuart & Co. Inc.; White, Weld & Co., and Shields & Co. (jointly); Morgan Stanley & Co.; The First Boston Corp., and Harriman, Ripley & Co., Inc.

OBSERVATIONS ... Continued from page 5

race tracks the "house take" is up the very least, the stock's great professionals.)

In the case of the odds against the market trader, in the form of for the forest. brokerage commissions and taxes, they are much greater. The commission charges alone for a roundstock amount to 2.77% to which

Actually analogous is the use of amount has been lost (with Monte Carlo's Bank nevertheless remaining unbroken).

"Flexibility" or Vagueness

Practical use of Mr. Darvas' Stop Order policy, if he has one, by his readers is impossible, since he confines himself to vagueness or "flexibility" (same thing) on this cardinal point. ("The relationship between the price and his stoploss point was a very flexible [sic] one, since it depended on many variable factors." (Since intuition or ear-playing ability are not transferable, and in view of the probable non-recurrence of some unique attending market factors, we will base our conclusions on the past objective market record. (Perhaps the Stock Exchange will come through with a more elaborate and complete study of results achievable from the use of this favored gadget.)

Both bullish and bearish markets are bound to register whipsawing of the stop-loss trader. At

Dechert Dynamics Stock Offered

Pursuant to an Aug. 8 offering circular, Plymouth Securities Corp., 92 Liberty Street, New York 6, N. Y., publicly offered 100,000 shares of this firm's 10c par common stock at \$3 per share.

The net proceeds, estimated at \$260,000, are to be used for general corporate purposes, including \$100,000 for electronic research and manufacturing expenditures and \$80,000 for completing and equipping a new building.

The company, through its subsidiary, Decherts Machine Shop, Inc., manufactures and sells two well known lines of proprietary industrial power presses. It also distributes industrial power lift trucks and steel building shells. The company, through its subsidiary Space Dynamics Corp., is researching and developing various types of transducers and other electronic components.

The company was organized under the Delaware Statutes on March 30, 1960, by Joseph P. Dechert and Allan A. Segal. Mr. Dechert in 1946, as a sole proprietor, commenced the business of manufacturing and selling custom machine parts and special custom machinery under the trade name Sept. 29, 1954, he incorporated his business in Pennsylvania, under Inc. During 1958 Decherts Machine Shop, Inc. acquired all the Co. assets, inventories, designs, patterns and good will of Robinson Press Company (founded 1906) and of Zeh & Hahnemann (founded 1904). The Robinson Press Co. was acquired for \$87,-400 which has all been paid. Zeh & Hahnemann was purchased for \$25,000 plus approximately \$50,-000 for accounts receivable. There is presently due on this contract \$7,249.28. In February, 1960, Decherts Machine Shop, Inc. acquired all of the outstanding stock of Space Dynamics Corp., which was organized in New Jersev on Feb. 16, 1958 by Allan A. Segal under the original name of Letco-Standard Corp., for the purpose of developing, manufacturing and selling pressure and temperature transducers and other electronic components.

WASHINGTON AND YOU

BEHIND-THE-SCENES INTERPRETATIONS
FROM THE NATION'S CAPITAL

WASHINGTON, D. C.—Practically everyone is affected by the movements in interest rates. In 1959 when interest rates on marketable securities rose to postwar highs there was alarm over the country.

On Capitol Hill, when the Treasury Department had to offer a 5% interest rate on a note of a little less than five years, there was a loud howl by the "low interest" rate advocates.

The liberal elements in Congress blamed the high interest rates on the Eisenhower and Republican Administration. Some of them said the Republicans believe in high interest rates, and that tight money was a goal of the Republican White House. Of course, there was no substance to their rash statements

180

Even before the old year was rung out and the new year of 1960 came in, there was an indication that interest rates had reached their peak. Since the beginning of the year there has been a marked decline in rates. Yields on Government securities, particularly those in the short term category, have sharply declined.

Treasury Expected to Refund Some Debt

As a result, the Treasury Department is looking ahead. As a matter of fact, the Treasury appears likely to be getting ready to do a substantial amount of refunding the national debt. If this proves correct, and there are indications at the Department that it will be done, this is a big and important story economically.

There have been reports in the capital for some time that, if and when the Treasury decides on a substantial amount of advance refunding, it would likely involve World War II issues which carry a 2½% coupon and which mature from 1967 to 1972

A few days ago there was partial confirmation of the reports and speculation in governmental circles by Under Secretary of the Treasury Julian B. Baird, who is one of the nation's foremost authorities on the Federal debt. [Ed. Note: See Mr. Baird's talk on page 3.]

Mr. Baird said these 1967-72 wartime issues total about \$28,-000,000. For the most part they are held by institutional long-term investors, pension funds, endowment funds, along numerous others who obtained them at par. The Under Secretary then made this pertinent observation of interest to the financial circles of this country:

"Because interest rates in the 7 to 12 year maturity range are

1

above the $2\frac{1}{2}\%$, many holders of these bonds are 'locked in,' in the sense that they would incur a principal loss if they sold the securities.

"If the Treasury can offer them in exchange a somewhat higher interest coupon in consideration for taking a 20, 30, or 40-year bond, these investors can better their curernt yield and still carry the new bond on their books at par. By offering such an exchange to holders of some issues of the tap 2½s, the Treasury might achieve several billion dollars of debt extension at one time, with perhaps no more immediate market impact than would be the case if \$½ billion to \$1 billion were offered for cash."

The Treasury Department, when it offers a longtime bond, attracts funds that normally would be available for other kinds of long-term securities. Because this is the case, the Treasury usually keeps its long-term issues to \$1 billion or less. Defend Financing Practices

Both the Treasury and Mr. Baird maintain with emphasis that it is not illogical to issue new securities maturing in the intermediate area of from five to 10 years as was done in August, and at the same time offer in exchange new securities to holders of bonds in the intermediate area of less than 10 years, for long term bonds.

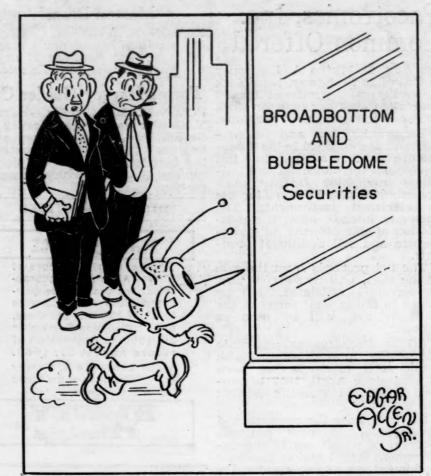

The Treasury maintains with some logic that the paramount reason for advance refunding lies in offering a typical long-term holder, whose bond is nearing the short-term status, to extend his bond before the holder elects to sell rather than extend it through a new security.

Treasury officials have been preaching for sometime that the colossal debt of our country is "manageable," if from \$20 to \$30 billion of the debt could be taken out of the one to five-year area and put in a period of more than five years—from five to 10 years.

Government Surplus Important Factor

One contributing factor, though not a major one by any means, to the present level of lower interest rates on Federal Government securities is the fact that the Government operated at an estimated cash surplus of about \$4.5 billion the first seven months of 1960. The improved position, of course, shifted the position of the Government from a borrower to a repayer of the debt it owes.

The Federal Reserve Bank of St. Louis says the declines in the yields of government securities such as the recent one, have

"Their radio-TV advertising seems to reach everywhere!"

occurred only twice since World War II came to an end. They were between May 1953 and June 1954 and again from November 1957 to July 1958. During both of those periods of declines, they accompanied an economic recession.

Therefore, this is the first time since the Japanese surrendered that interest rates have declined so much and for so long a time while business continued at a healthy rate of activity.

Although the interest rates on Federal Government securities have gone down considerably, this has not been true for most interest rates on securities issued by businesses and by state and municipal governments. The reason is that demand for money had been fairly brisk. Therefore, the rates of interest on these securities have not declined as great as those in the Federal Government category.

Mortgage debt rose the first seven months of 1960, but at a lower level than the corresponding period of 1959. Interest rates on mortgages have not declined very much, with rates averaging about 6%, according to some of the Federal Reserve Banks.

More Mortgage Money Forecast

The president of the Federal National Mortgage Association, J. Stanley Baughman, is convinced that there will be a continued increase in the supply of home mortgage money between now and Christmas.

The FNMA chief believes that the ease in the money market that was shown in the second quarter apparently is going to continue for the next several months. Therefore, he predicts more favorable mortgage conditions for the home buyer this fall and winter.

A quarterly report by the agency's operations showed that the value of mortgages offered for sale to the Federal National Mortgage Association declined 27% duing the April-June period. The decline was from \$389 million to \$289 million.

Credit funds come primarily from savings. If demand for credit is brisk the interest rate goes up, and if the demand is slack, the rates go down. The Federal Reserve Bank of St. Louis in its Review makes a pertinent observation that the Treasury Department has been advocating to Congress for some time, but Congress has turned a deaf ear to the proposition of lifting the ceiling on interest rates for Government securities bearing a maturity date of over five years.

"Experience indicates that for interest rates to serve their functions best they must continue to be unencumbered and free to move with changing economic conditions," said the bank. "Nevertheless, there is a tendency to rationalize that what has occurred in the recent past is normal and any variation is suspect. Thus, whenever rates change some people become alarmed."

[This column is intended to reflect the "behind the scene" interpretation from the nation's Capital and may or may not coincide with the "Chronicle's" own views.]
